FRESENIUS KABI
caring for life

Propofol 100 mL Now Available in a 2% Format due to Shortage of Canadian labelled Propofol Injection 1% Products

To help mitigate the unprecedented demand and shortage of Propofol Injection 1% across Canadian healthcare institutions as a result of the COVID-19 pandemic, Health Canada has included **Fresenius Propoven 2% (propofol 20 mg/mL) in 100 mL vials** to the List of Drugs for Exceptional Import and Sale. The strength of Fresenius Propoven 2% Emulsion has not previously been authorized in Canada.

Fresenius Propoven 2% (propofol 20 mg/mL), 100 mL, **contains double the concentration of active ingredient** compared to ALL propofol injection products (propofol 1%, 10 mg/mL) currently authorized and marketed in Canada. This product is preservative-free, contains a latex-free stopper, and has a shelf-life of 2 years. Special attention is required to ensure correct patient dosing.

Important Reminders:

- 1/2 the volume is required vs 1% Propofol
- Infusion pump drug library update may be required
- Check infusion rate on infusion pump

The package leaflet will be available on the Fresenius Kabi Canada website at https://www.fresenius-kabi.com/en-ca/.
