

International Dysphagia Diet Standardisation Initiative (IDDSI) Framework¹ and Fresubin® Oral Nutritional Supplements (ONS)

This statement reflects the IDDSI testing results, using the IDDSI funnel.

Each product was evaluated with respect to the IDDSI framework. For liquids the IDDSI flow test was performed using an IDDSI funnel, and at least three individual samples were tested. For dessert style puddings the IDDSI framework fork-drip and spoon-tilt tests were used.

Testing has been completed by an independent consultant. Where possible we have tested all products and all flavours from one batch and at one time point in their shelf life. Products were tested at chilled ($6 \pm 1^{\circ}\text{C}$) and room temperature ($25 \pm 1^{\circ}\text{C}$).

All liquids become thicker when chilled, and the thickening will also vary between products depending on their fat, sugar and protein content. These variabilities have always existed.

Please note that where flavours of products fall between levels, they cannot be assigned to a particular IDDSI level. Details of these products are provided in the table below.

The following products are intended for the dietary management of patients with or at risk of disease related malnutrition.

As standard ONS are not labelled with a specific IDDSI level, it is the responsibility of the clinician to ensure their suitability and these results should only be used as a guide. It is important to bear in mind that it can sometimes be difficult to predict serving temperature and suitability may also vary between different patients.

Standard ONS are not designed specifically for use in dysphagia and their consistency may be more sensitive to temperature and variation in syringe/funnel nozzle dimensions. We would advise extra clinical attention to ensure patients are safe with the chosen ONS.

If clinicians or patients choose to use products at other temperatures, then they do so at their risk. Clinicians are advised to audit thick fluids at the intended serving temperature.¹

If you require information regarding other products within our ONS range and their IDDSI classification, please contact the Scientific Affairs team direct on 01928 533516 or email scientific.affairsUK@fresenius-kabi.com

N/A - Not applicable. Fresubin Thickened is a pre-thickened ONS specifically designed for patients with dysphagia and should be served at room temperature as per the user instructions on the product label.
