Statement on the recommended Storage and Use of Enteral Nutrition in EasyBags after Opening (incl. application of Bolus Adapter)

Opened EasyBag products can be used within a 24 hours range at temperatures < 40°C if the giving set remains connected.

In case of disconnection opened EasyBag products can be used within a 24 hours range at room temperature (15-25°C). It is not recommended to store opened and disconnected EasyBags at temperatures > 25°C.

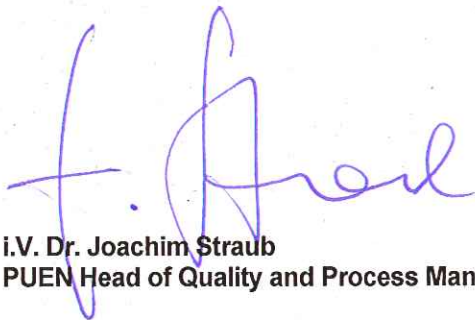

EasyBag-Bolusadapters adapted to EasyBag products can be used within a 24 hours range under room temperature (15-25°C) conditions without disconnection of the EasyBag Bolusadapter.

Generally, application of the recommended daily dosage respectively of the single packaging should be applied continuously rather than by bolus application.

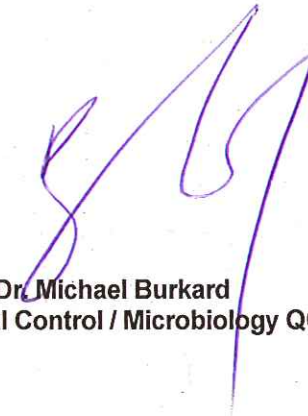

In general, giving sets, EasyBag-Bolusadapters and EasyBag products must be used under strict hygienic conditions and following the instruction for use.

It is important to consider that the hygiene of the application of Enteral Nutrition - in particular the giving sets and EasyBag-Bolusadapters that are in direct contact with the nutrition - is fully within the responsibility of the user of the products respectively the clinical staff.

On behalf of Fresenius Kabi Deutschland GmbH
