Apheresis Collection
Fenwal Amicus Separator

Meeting your mission-critical goals
PRECISION DESIGN TO HELP YOU ACHIEVE MORE

Designed to deliver

Amicus features technology that, combined with our expert consulting services, can help you increase the precision and efficiency of your platelet collections, yielding high split rates across a wider range of donors. Even before you begin a procedure, with Amicus, you’re already ahead.

Fenwal Customer Solutions

Designed to help blood centers get more from Amicus, our Customer Solutions team works closely with blood centers to maximize each donation and streamline operations.

Product options

Designed to ease the product selection process and customize each procedure to each donor.

Weight scales

Designed to ensure accurate fluid volumes are collected and returned.

Interface detector

Optically monitors the separation process for optimal results.
The Fresenius Kabi Fenwal Amicus Separator helps blood centers increase their inventory of lifesaving platelet and plasma products, enhance the efficiency of their apheresis professionals, and expand the impact of their donors.
Because one more dose collected is one more patient treated, one more person saved or one more life renewed. It’s why we do this. It’s why more matters.
Fenwal Amicus can tailor procedures around the individual donor – anywhere from start to finish and in-between. With the control Amicus offers, your apheresis professionals can maximize the impact of each donation.

**Fine-tune for best outcomes**

At the beginning of every collection, Amicus lets you easily select product combinations most appropriate to your donor’s parameters and to center demand—single, double, or triple platelet doses, with or without concurrent plasma and/or RBCs. Expand your options even further by choosing Platelet Additive Solution as a storage medium to reduce storage plasma volume. On Amicus, the product options calculator helps you quickly see the options available from that donor. During the procedure, Amicus allows operators to adjust the collection based on donor characteristics or center needs.

**Adjust for enhanced donor comfort**

With irradiated disposable kits, pre-attached solutions and automated saline replacement, you’ll start each collection from a strong foundation of donor safety. Throughout a procedure, Amicus lets you fine-tune flow rates, regulate citrate return, and provide saline to the donor to meet your expectations of donor comfort and collection yield.

**Optimize procedure selection for efficiency**

Amicus allows you to perform procedures efficiently and effectively with a single needle – or choose a double needle when you want a shorter procedure with the same platelet yields.
Information that increases efficiency

By using Fenwal Amicus DXT Relay-Data Management, blood centers can clearly identify ways to achieve more efficient collections, and apheresis professionals can focus on their practice and their purpose—not on paperwork. Link Amicus to your blood establishment computer system (BECs) with DXT Relay today! Load donor parameters from BECS to Amicus before collection and send procedure records to BECS after each collection. Fast, accurate barcode scanning streamlines workflow when combined with the BECS interface and may help reduce risk of manual entry errors as well as avoid product discards due to documentation omissions.

Also with real-time dashboards and reports, blood centers can measure, track and analyze procedural success rates across site, operator and device, and identify opportunities to improve operational efficiency through data driven insights.

Professional training to advance talent

Our clinical consultant team works hand-in-hand with apheresis professionals and in-house trainers, arming them with the knowledge, tools and support they need to elevate their practice, enhance their technique and address their greatest challenges. They’re always ready to get the most from Amicus and from every donation.

Dedicated team to support operations

In addition to clinical consultants, the Amicus support team draws from a national network of field service engineers dedicated to getting you up and running, and ensuring a smooth and seamless experience. Amicus offers 24/7 support on our clinical and technical hotline, resolving issues by phone or dispatching engineers into the field for preventative maintenance or routine service.
Refer to the Amicus Separator Operator’s Manual and DXT Relay instructions for use for a full list of warnings and precautions associated with the use of each device.
